Question 01

```
01.using System;

namespace KilometerToMeterConverter
{
    public class ConvertValues
    {
        public void KilometerToMeter()
        {
            Console.WriteLine("Enter the value
in kilometers (km):");
            string input = Console.ReadLine();

            if (double.TryParse(input, out
double kilometers))
            {
                double meters = kilometers *
1000;
```

```
            Console.WriteLine($"{kilometers} kilometers is equal to {meters} meters.");
        }
        else
        {
            Console.WriteLine("Invalid input. Please enter a valid number for kilometers.");
        }
    }
}

class Program
{
    static void Main(string[] args)
    {
        ConvertValues converter = new ConvertValues();
        converter.KilometerToMeter();
    }
}
```

```
}

02.using System;

namespace KilometerToMeterConverter
{
    public class ConvertValues
    {
        public void KilometerToMeter(double
kilometers)
        {
            double meters = kilometers * 1000;
            Console.WriteLine($"{kilometers}
kilometers is equal to {meters} meters.");
        }
    }

Please enter a valid number for
kilometers.");
            }
        }
    }
}
```

```
03.using System;

namespace KilometerToMeterConverter
{
    public class ConvertValues
    {
        public double
KilometerToMeter(double kilometers)
        {
            double meters = kilometers * 1000;
            return meters;
        }
    }

    class Program
    {
        static void Main(string[] args)
        {
            Console.WriteLine("Enter the value
in kilometers (km):");
```

```
            string input = Console.ReadLine();

            if (double.TryParse(input, out
double kilometers))
            {
                ConvertValues converter = new
ConvertValues();
                double result =
converter.KilometerToMeter(kilometers);
                Console.WriteLine($"{kilometers}
kilometers is equal to {result} meters.");
            }
            else
            {
                Console.WriteLine("Invalid input.
Please enter a valid number for
kilometers.");
            }
        }
    }
}
```

Question 02

° using System;

```
namespace
CircleAreaCircumferenceCalculator
{
    class Program
    {
        static void Main(string[] args)
        {
            Console.WriteLine("Enter the radius
of the circle:");
            string input = Console.ReadLine();

            if (double.TryParse(input, out
double radius))
            {
                double area = Math.PI * radius *
radius;
```

```
                double circumference = 2 *
Math.PI * radius;

                Console.WriteLine($"Area of the
circle: {area}");

Console.WriteLine($"Circumference of the
circle: {circumference}");
            }
            else
            {
                Console.WriteLine("Invalid input.
Please enter a valid number for the
radius.");
            }
        }
    }
}
```
